

# POWERED GATE SAFETY TRAINING COURSE

**Beninca, working in partnership with the DHF, are offering a 2-day diploma level Powered Gate Safety Assured Course. The course has been created for installers/fabricators, designers and surveyors and provides comprehensive training on the safe design and installation of powered gates.**

The 2-day course is hosted by Beninca UK at our bespoke training facility at our premises, just outside Newbury, Berkshire, and will cover all aspects of gate safety - from the initial risk assessment, system design and installation, through to force testing.

The objective of the course is to ensure that all candidates are fully conversant with current safety regulations, that they will be able to prepare a technical file, and also to issue a Declaration of Conformity.

Each successful candidate will receive a DHF Powered Gate Safety Assured Diploma, which shows that they are trained to provide and install a compliant gate system in any required environment, including residential, commercial and industrial applications, and also in public places.

The course has been developed with input from the Health & Safety Executive and is currently the Industry's only scheme to offer this level of training.

Importantly, as part of our continued support of our trade account customers, the DHF course fee is heavily subsidised by Beninca UK, so pay just £310.00 per candidate. The course is open to members and non-members of the DHF.

In some cases, we may add diploma holders to our Beninca network of installers.

The DHF Powered Gate Safety Assured Diploma offers your customers peace of mind that they have chosen a safe product from a qualified and fully trained installer, as it ensures that you are up to date with current regulations, technology and legislation.

Spaces are strictly limited to 14 delegates per course and due to the heavily subsidised fee, this course is always in high demand so please ensure you book early to avoid disappointment.

## THE TWO-DAY COURSE COVERS:

- ✓ Law & regulations
- ✓ Use of standards
- ✓ Risk assessment
- ✓ Testing and inspection
- ✓ Documentation
- ✓ Repair and maintenance
